CONGRATULATIONS!

You are a vital member of the nation’s public health system. You and thousands of other volunteer local boards of health members provide guidance, oversight and leadership for your local health departments. This role is important because it is up to you and your fellow board members to make sure that the health needs of your community are met.

What is public health? Public health is the science and art of preventing disease, prolonging life and promoting health, through organized community efforts. Its concern is not just the absence of disease but also includes mental health and social well-being.

Today, modern public health practices employ a multidisciplinary approach utilizing a myriad of public health professionals and programs that focus on health promotion, treatment of illness, rehabilitation, and disease prevention and control. It also involves the collection, analysis and use of vital health data to establish or influence public policy.

Public health is both environmental and personal. Environmental health is the branch of public health concerned with all aspects of the natural and manmade environments that may impact or effect human health. There are many public health programs available, some of which focus on disease control, sanitation and hygiene; and, the elimination of exposure to toxins in the air, water, soil, food, workplace, schools and homes. Some programs focus on and provide immunizations against communicable diseases and offer special screening for early detection of disease. Others provide clinical services and education for maternal, well-baby and child health care; healthy eating to improved nutrition; discussing the importance of maintaining good personal hygiene; and the benefits of exercise. Still other programs are informative, promoting awareness to the health hazards of smoking, substance abuse and many, many others.

The following information has been designed to assist you in understanding your roles, responsibilities, and authority as a member of a local board of health. We urge you not only to master the information included here, but also to budget for and attend training sessions offered by the New Jersey Local Boards of Health Association (NJLBHA) that will assist you in the continuing development of your knowledge base and leadership skills.

We would like to thank the members of the New Jersey County and City Health Officials Association for their invaluable input, perspective, and assistance in developing this manual.
PUBLIC HEALTH

CORE FUNCTIONS
Public health as defined by the National Institutes of Health in 1998 consists of 3 core functions: assessment, assurance and policy development.

Assessment
- Monitor the health status of members of the community to identify health issues and needs.
- Diagnose and investigate identified health issues and hazards within the community.
- Evaluate the effectiveness, accessibility, and quality of the health services within the community.

Assurance
- Assures the community that a competent public and personal care workforce will address their needs.
- Links people to needed personal health services and provides those services and health care when it is otherwise not available (e.g., Public Health clinics).
- Enforce laws and regulations that protect health and ensure safety.
- Research new insights and innovate solutions to health problems.

Policy Development
- Develop policies and plans that support health efforts on both individual and community levels.
- Mobilizes community partnerships to identify and solve health problems.
- Inform and educate the community.
ESSENTIAL PUBLIC HEALTH SERVICES
The following describes the 10 essential public health activities and serve as the basis of the New Jersey Public Health Practice Standards.

- Monitor health status to identify community health problems.
- Diagnose and investigate health problems and health hazards in the community.
- Inform, educate and empower people about health issues.
- Mobilize community partnerships to identify and solve health problems.
- Develop policies and plans that support individual and community health efforts.
- Enforce laws and regulations that protect health and ensure safety.
- Link people to needed personal health services and assure the provision of health care when otherwise unavailable.
- Assure a competent Public Health and personal health care workforce.
- Evaluate effectiveness, accessibility and quality of personal and population-based health services.
- Conduct research for new insights and innovative solutions to health problems.
WHAT IS A BOARD OF HEALTH?
A board of health is a collection of individuals, appointed or elected, whose authority is derived from state and local statute, and is responsible for coordinating public health activities at the municipal and county levels. As such, boards of health are an integral part of protecting, improving and promoting the health of residents within the community. It is also a primary proponent of funding for public health.

Function and authority of a board of health is dependent upon its type as described below. The board of health works closely with the health officer to assure that organizational activities are in alignment with the needs of the community and establish goals for the successful performance of the agency. A local board of health is subject to periodic evaluation by the New Jersey Department of Health to ensure that the municipal and county health department and local board of health are operating in accordance with the current Practice Standards.

FUNCTIONS OF A BOARD OF HEALTH
The core functions of a board of health are consistent with those of public health, i.e.: assessment, policy development and assurance, as stated above. Additionally, their responsibilities include: administration, program planning, evaluating the organizations effectiveness, financial stewardship and representing the community’s interests.

1. Administration: The board defines the organization’s purpose by establishing a clear statement of mission. Administration and/or oversight includes elements of assurance and assessment:
   - Have a competent public health and personal healthcare work force.
     This encompasses the responsibility of evaluating professional competencies and job descriptions in the hiring of the health director/health officer.
   - Conduct performance evaluations of the health officer and health department staff.
   - Compliance with legal responsibilities –
     - Understanding the Board’s legal responsibilities.
   - Conduct board meetings in accordance with the Open Public Meetings Act.

2. Program Planning: Based on the mission statement, the board determines activities that will support the mission of the health department and the health of the community. Program planning contains elements of assessment and policy development.
   - The board reviews specified needs to be addressed and target populations to be served.
   - Review goals and objectives to address population needs i.e., public health priorities.
   - Review and/or revise public health ordinances.
   - Propose or enact public health ordinances.
   - Ensure that a community health assessment is completed.
3. Evaluation of Organizational Effectiveness: The board regularly evaluates the progress of the health department toward meeting overall objectives.

- Reviews the achievement of the overall mission.
- Evaluates the response to new situations.
- Consults with the health officer on long range planning based on the public health needs of the community.

4. Financial Stewardship: The board must take a lead in the development of financial resources.

- Advocates for appropriate funding for health department activities.
- Develops realistic budget to support the program plan.
- Recommends the budget annually, and approves bills.
- May reallocate adopted budget as needed to meet changing public health priorities.
- Establishes compensation and conditions of employment

5. Represents the interests of the citizens. The board represents the public interest.

- Represents the health department to the community.
- Represents community interests to the health department.
WHO MUST HAVE A BOARD OF HEALTH?

N.J.S. 26:3-1 Establishment of local board

There shall be a board of health in every municipality in this state, which board shall consist of members appointed or designated, or both, as provided by this chapter, except that in any municipality operating under laws establishing a form of government for such municipality under which the full of a local board of health cannot be exercised by a local board of health so appointed or designated, the respective functions of a local board of health shall be exercised by such boards, bodies, or officers as may exercise the same according to law.

The functions of the local board of health can be performed in several different ways. What is important is that each of the functions of the board of health listed above is performed.

In determining which formal structure applies to your community, you need to know under which form of government your community is organized. The chart below can assist you in determining which form or local board organization would apply to your community.

FIVE TYPES OF BOARDS OF HEALTH

1. Autonomous Board
   - Appointed by the mayor/governing body.
   - Makes policy decisions regarding purposes, functions, goals and activities.
   - When operating its own health department, the board selects, employs and evaluates the health officer, who reports to the board and is responsible to it.
   - Passes, alters and/or amend ordinances (N.J.S 26:3-31) and, through the health officer, has enforcement powers.
   - Establishes a budget based on recommendations of the health officer and available funds as allocated by the governing body.
   - May serve multiple municipalities under a mutual shared services contract.
   - May become a member of, or contract with, a regional health commission (N.J.S 26:3). Under this arrangement, local public health ordinances are superseded by any similar commission ordinances. The commission assumes enforcement powers.
   - If a municipal, autonomous board decides to join a county health department which has a county board of health, the local board of health becomes an advisory board and relinquishes its autonomous power to the county board. If the local board of health contracts with the county department which does not have a county board, the local board of health retains its authority unless it was already an advisory board with the municipal government.
   - Contracts for services, as needed, including animal control.
   - Hears appeals for food service violations, septic systems and other issues.
2. Advisory Board

- Appointed by the mayor/governing body.
- Primarily gives advice and makes recommendations on public health matters to the municipal governing body. The governing body is the functioning local board of health.
- The advisory board does not appoint the health department staff. However, the health officer works with the members of the advisory board to assist in the development of policy and program recommendations.
- Cannot pass ordinances.
- Normally created when municipality is operating under one of the optional forms of government

3. County Board

- Created by County Board of Freeholders
- Individual municipalities can decide if they want to be members
- Enacts health ordinances
- Appoints health officer and employees
- Adopts budget

4. Regional Health Commission

- Two or more municipalities may form pursuant to N.J.S. 26:3-84
- Regional health commissions are constituted as autonomous boards of health and have all powers and responsibilities.
- Individual local boards may remain.
- Commission may pass ordinances effective in all member municipalities.
- Each member municipality has one or two members on the commission, depending on the number of municipalities served by the commission.
- Members appointed by the local board of health, if they exist, otherwise by governing body of municipality.
- Commission appoints health officer and other employees.
- Adopts budget.
5. Optional Forms of local government.

Local governments organized under the Faulkner Act, Walsh Act, 1923 Municipal Manager or Special Charter do NOT have an autonomous board of health, but they can and should have an advisory board of health. The functions of a board of health are divided among various entities:

- Budget is enacted by the council as proposed by mayor, manager or administrator.
- Ordinances are enacted by council.
- Health Officer is nominated by mayor, manager or administrator and confirmed by council.
- Programs are developed or reviewed by mayor, manager or administrator
- These are the forms of government where advisory boards of health are very useful.

6. The Local Boards of Health table below identifies the various composition and authority of boards of health.

* All physicians must be resident of city.

**Footnote 1** The members of the Township Committee either 3 or 5, Tax Assessor, or Township Clerk, if no Tax Assessor and school nurse or township physicians, constitute the Board of Health.

**Footnote 2** No more than 2 Freeholders. Members should be from communities served.

**Footnote 3** Each member municipality appoints two members to the Commission unless there are more than seven-member municipalities in which event each municipality has one representative and one alternate. Members are appointed by the autonomous Local Board of Health, if there is one or by the governing body, if there is no local board of health.
EXPECTATIONS
The relationship between a board of health and its health officer should be collaborative and collegial. Communication is key in developing and fostering this relationship. The board relies on its health officer, for technical and leadership abilities. The health officer’s advice on public health issues is crucial to the board’s determination of policy.

Whether the board has its own health department or contracts with a county or regional health department, it is crucial that the health officer attends board of health meetings and provides comprehensive reports on health department activities in your community.

The day-to-day operations of the department are not the responsibility of the board, but rather of the health officer and department director whom they have appointed. In turn, the members of the board of health have the overall responsibility to ensure that health services are delivered to their community and should make every effort to support the health officer in achieving the established goals. One key area where a board of health can support the health department and its staff is in lobbying the governing body for adequate financial support for the health department and health programs. Board members serve as the eyes and ears of the community and assist in identifying needed programs within the community.

Boards of Health must have access to legal counsel. Many boards of health hire their own attorney, or have one assigned to it by the local government. The attorney may attend regular meetings, advises the board on legal issues and is responsible for writing ordinances as recommended by the board. The board of health attorney, among other things, is responsible for conducting research on existing public health statutes and recommending appropriate action and/or updates. This is particularly valuable when residents or businesses are seeking exceptions to public health practices, appealing the failure of the health department to issue a license or seeking reinstatement of a revoked license. The health department director and health officer have access to the board attorney on a regular basis to assist in the operation of the department.

A HEALTH OFFICER EXPECTS A BOARD WILL:

- Counsel and advise using professional expertise and familiarity with the community.
- Consult with the health officer on issues the board is considering.
- Delegate responsibility for all administrative functions and refrain from micromanaging administrative details.
- Share all communications with the health officer.
- Support the health officer and staff in carrying out their professional duties.
- Support the health officer in all decisions and actions consistent with policies of the board and the standards of the agency.
- Hold the health officer accountable for the supervision of the agency, recognizing that agency staff is responsible to the health officer.
- Evaluate and recognize the work of the health officer.
- Establish public health policy.
- Assist in budget development and advocacy.
- Establish clear lines of communication with the health officer and be available for consultation.
- Attend training designed for members of local board of health, at least annually.
- Establish quarantines and isolation in the event such action is required. (Only a board of health has this authority.)
A BOARD EXPECTS ITS HEALTH OFFICER WILL:

- Serve as Chief Executive of the Health Department.
- Advise the board on issues under discussion.
- Develop and recommend policies for consideration.
- Effectively implement board policies.
- Keep the board informed fully and accurately on activities of the agency.
- Make professional recommendations on all problems and issues being considered by the board.
- Develop the agency budget in consultation with the board and keep the board advised of budget problems.
- Recruit and retain the most competent personnel and supervise accordingly.
- Devote time to professional development for the staff and health officer.
- Attend all board of health meetings.
- Operate the agency in compliance with New Jersey Public Health Practice Standards.
- Maintain staff certification and participate along with staff in continuing education.
- Inform the board of any actions or requirements of the NJDOH, since the health officer also reports to the NJDOH.

PUBLIC HEALTH PRACTICE STANDARDS OF PERFORMANCE FOR LOCAL BOARDS OF HEALTH IN NEW JERSEY N.J.S. 26:1A-15 and 26:3A2-1 et seq. Every board member should have a copy of these standards. If you do not have one you will find them on the New Jersey Local Boards of Health Association (NJLBHA) website www.njlbha.org. The following is a brief summary of these standards.

Each New Jersey Local Board of Health shall:

- Ensure that there is a mechanism that provides leadership to develop partnerships with community organizations and/or agencies which have a demonstrable effect on, or compelling interest in, the health status of the population in accordance with N.J.A.C. 8:52-9.2.
- Ensure representation in the planning process to develop the Community Health Improvement Plan as set forth at N.J.A.C. 8:52-9.2.
- Ensure the development of local policies and programs that are consistent with the Community Health Improvement Plan as set forth at N.J.A.C. 8:52-11.2.
- Ensure that Public Health staff, in addition to meeting the requirements for licensure, certification, or authorization, possess or are actively pursuing training for the skills necessary to provide each of the “10 Essential Public Health Services” as set forth at N.J.A.C. 8:52-3.2(a) 1 through 10.
- Assure that public health policies promote and support the population’s health and safety goals identified in the health improvement strategies that were developed through the countywide or multi-countywide Community Health Improvement Plan and incorporate by reference prior planning information obtained through other processes.
• Ensure that there is a mechanism to guide the development of the Community Health Improvement Plan.

• Ensure the enforcement of the provisions of the State Sanitary Code.

• Consult with the health officer during the development of any new public health ordinances or amendments to any existing public health ordinances. The health officer or his or her designee shall attend all public hearings held regarding new or amended ordinances that affect the practice of public health within his or her jurisdiction.

• Conduct a sanitation and safety program at public bathing places (that is, swimming pools, lakes, rivers and ocean bathing places), based upon the current Recreational Bathing regulations contained in the State Sanitary Code (see N.J.A.C. 8:26).

• Conduct a sanitation and safety program for campgrounds based upon State law and Chapter 11 of the State Sanitary Code (N.J.A.C. 8:22-1).

• Conduct a youth camp sanitation and safety program (N.J.A.C. 8:25).

• Maintain surveillance of retail food establishments, and food and beverage vending machines.

• Conduct an occupational health program.

• Conduct a public health nuisance program.

• Conduct a program for the surveillance, investigation and control of reportable diseases.

• Promote and provide immunizations for protection against childhood vaccine preventable diseases.

• Conduct a program for the control of rabies and other zoonoses.

• Control sexually transmitted diseases.

• Administer a planned program to prevent and control HIV infection.

• Provide health supervision for infants and preschool children.

• Provide for the prevention and control of lead poisoning in young children.

• Reduce infant mortality by improving access to prenatal care and related services in accordance with guidelines established by the Department of Health and Senior Services.

• Provide cancer prevention for populations at high risk.

• Provide for diabetes education services.

• Provide cardiovascular disease control services.

• Provide for a health program at locations selected by the health department which identifies the health needs of adults 65 and older.
BOARD MEMBER RESPONSIBILITIES. The responsibilities of a local board member are varied. With the advice and consultation of your health officer, you may be required to make decisions about environmental public health matters, learn about and approve health education programs, decide what clinical services are needed and can be provided, work with community leaders, act as a liaison between the health department and the public, advise a governing body on effective public health policy, propose health-related ordinances, and approve financial budgets and expenditures.

It is important that local board of health members understand the current concepts that drive efforts towards public health improvement. These are indicators, identified as the social determinates of health (SDOH) and defined as: economic and social conditions (where you are born, live, learn, work and play) that influence individual and group differences in health status (a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity).

The five determinants of health are: economic stability; education; social and community context; health and health care and, neighborhood and built environment. It is clearly understood that education is a predictor of better health as it improves access to healthy foods, health care and safe neighborhoods. By understanding SDOH we improve individual and population health as well as advance health equality. Education on health issues and access to health services are key components of BOH concerns.

AS A BOARD MEMBER YOU SHOULD:

1. BE INFORMED
   - Know what your board is about and what its mission is to your community.
   - Become familiar with the guidelines and rules that governs the department and the board.
   - Become familiar with all programs and services provided.
   - Spend time with your health officer to learn his/her goals and roles.

2. PROMOTE SERVICES
   - Evaluate what is being done to inform the community.
   - Create a marketing plan in conjunction with the health officer, suitable to local health department resources.
   - Refer to the 10 Essential Public Health Services in your decision-making process.

3. BE COMMUNITY CONSCIOUS
   - Identify community needs and offer programs that are tailored to those needs.
   - Educate yourself about the needs of the people served.
   - Represent the health district to the public and to private entities when authorized.

4. ATTEND MEETINGS
   - Regularly attend meetings as scheduled.
   - Attend standing committee meetings, if a member.
• Participate as an ad hoc committee member, if appointed.
• Attend board retreats, in-service workshops and other board development activities.
• Attend and participate in special events as needed.
• Be well informed on issues and agenda items in advance of meetings.

5. KNOW YOUR OBLIGATIONS

• Establish policy.
• When operating its own health department, hire, supervise and evaluate the health officer.
• Monitor finances.
• Maintain and update long-range plans with the health officer.
• Comply with the Open Public Meetings Act, Public Ethics Act, financial disclosure requirements, Pay to Play statute and local ordinances.

6. DUTIES

• Attend meetings and show commitment to board activities.
• Contribute skills, knowledge and experience when appropriate.
• Listen respectfully to other points of view; however, speak out on issues you do not favor. Silence is often interpreted as consent.
• Participate in Board decision making.
• Assume leadership roles in all board activities, including identification of current and potential sources of funding.

CHECKLISTS

QUESTIONS BOARD MEMBERS SHOULD ASK THEMSELVES

☐ Do you budget for basic training and attend training?
☐ Does your board devote most of its time to developing and setting policies for your agency/ is your policy manual current?
☐ Does your board have working committees to initiate and monitor much of the board’s work?
☐ Does a current job description exist for your board members?
☐ Does your board have a systematic planning process?
☐ Is your board knowledgeable about current issues in public health?
☐ Does your board have a mission statement?
☐ Do your board members understand their responsibility for the finances of your organization?
Are your bylaws reviewed regularly and do you operate in accordance with them?
Are relationships between Board Members and Health Officers characterized by openness, trust and mutual respect?

QUESTIONS A BOARD SHOULD ASK ITSELF

- What do we want to accomplish? (Setting policy and establishing goals)
- What is the road map to follow? (Defining mission, formulating guidelines, making plans, suggesting alternatives)
- How will we pay for it? (Budgeting)
- How do we reach our goals? (Establishing priorities, delegating responsibilities)
- Did we succeed or fail? (Evaluating)

GOVERNMENTAL PUBLIC HEALTH PARTNERSHIP /COMMUNITY HEALTH IMPROVEMENT PLAN (CHIP)

Every board of health has the responsibility to encourage and enable participation by its health officer and staff in countywide or multi-countywide planning through a Governmental Public Health Partnership (GPHP), in accordance with the requirements of the New Jersey Public Health Practice Standards.

The GPHP has the major responsibility of convening key individuals and agencies with an interest in public health to perform a formal Community Health Assessment (CHA), which determines the health status and quality of life of the community. The assessment identifies public health priorities, assesses the community’s capacity to address public health and social service needs, and allows for statewide comparability. The assessment also identifies those populations, if any, who are underserved by providers in that community and provides information about resource distribution and costs.

The completion of the assessment leads to the development of a Community Improvement Plan (CHIP), a formal written plan that identifies priority health issues and includes the roles and responsibilities of all participants as well as a mechanism for accountability for agreed upon goals, objectives and services.

The CHIP process is an ambitious and bold effort at community engagement for a common good. No single organization has the depth of resources needed to raise community health to an optimal level or even to maintain it at its current level. The CHIP process is based on the idea that through collaboration and synergy, two plus two will equal a great deal more than four. Another important feature of the CHIP is that the plan arises out of the community, which then has a greater investment in its implementation.

ACCREDITATION

As the governing bodies of local health departments, it is important that board of health members understand the public health accreditation process and their role to support the LHD in this effort.
Public Health Department Accreditation is the process of measuring the health departments performance against a set of nationally recognized practice-focused and evidenced-based standards. The goal is to improve and protect the health of the public by advancing the quality and performance of the health department.

The Public Health Accreditation Board (PHAB), is a nonprofit organization dedicated to advancing the continuous quality improvement of Tribal, state, local, and territorial public health departments. Their website www.phaboard.org offers information that will assist you in this process should you choose to pursue accreditation of your department.

An Orientation to Accreditation series, comprised of four short online videos provide an overview on the accreditation process, and can be found at http://www.phaboard.org/education-center/phab-online-orientation/ You may wish to discuss with your health officer the feasibility of pursuing accreditation and the resources needed to do so.

COMMON PUBLIC HEALTH TERMS

AIDS (Acquired Immune Deficiency Syndrome): a medical condition caused by the human immunodeficiency virus (HIV). The disease alters the immune system making people more vulnerable to infections and diseases.

Assessment: Regular and systematic collection, assembly, analysis and the availability of community health information.

Assurance: Public Health agencies assure that necessary services are provided to achieve community goals and objectives for healthy people.

Capacity Standards: Statements of what Public Health agencies must do as part of ongoing daily operations to adequately protect and promote health, prevent disease, injury and premature death.

Core Functions: The three basic functions of the Public Health system: assessment, policy development and assurance.

E-coli: common species of bacteria that occasionally results in gastrointestinal disease.

Environmental Health: An organized community effort to minimize the public’s exposure to environmental hazards and preventing transmission of disease or effect of injury agent.

Epidemic: The occurrence in a community or region of disease cases in excess of expectancy.

Epidemiology: Epidemiology is the study (scientific, systematic and data-driven) of the distribution (frequency, pattern) and determinants (causes, risk factors) of health-related states or events (including disease) in specified populations (neighborhood, school, city, state, and country, global) and the application of this study to the control of disease and other health problems. Epidemiology is the method used to find the causes of health outcomes and diseases in populations; the patient is the community and individuals are viewed collectively.

Fee-for-service: A charge made for each unit of health service, usually set by the provider. Some services fees may be controlled by the state. Fees for state mandated programs are determined by cost methodology set by the state.

Food Borne Illness: Illness caused by the transfer of disease organisms or toxins from food to humans.

Groundwater: Water beneath the earth’s surface between saturated soil and rock that supplies wells and springs.

Health Equity: The study and causes of differences in the quality of health and healthcare across different populations. The absence of avoidable, unfair, or remediable differences among groups of people, whether those groups are defined socially, economically, demographically or geographically or by other means of stratification.
**Healthy People 2010**: A prevention initiative that presents a national strategy for improving the health of the American people.

**Human Immunodeficiency Virus (HIV)**: The retrovirus (an RNA based virus) that causes AIDS.

**Immunization** is the process whereby a person is made immune or resistant to an infectious disease, typically by the administration of a vaccine. Vaccines stimulate the body's own immune system to protect the person against subsequent infection or disease.

**Incidence**: The number of new cases of a specific disease diagnosed or reported during a defined period of time.

**Infectious Disease**: A disease caused by organism that cause infection in a human host and may be communicable (contagious) to other persons, animals or through other intermediaries.

**Local Board of Health**: One of the types of boards of health (see **Five Types of Boards of Health**) appointed to protect and improve the health of the community.

**Managed Care**: Health care provided within a system using a defined network of providers.

**Medicaid**: A federal program authorized under Title XIX of the Social Security Act to provide medical services to clients who meet eligibility requirements.

**Medicare**: Federal insurance program covering delivery of medical services to people ages 65 and older.

**Morbidity**: The rate of incidence of disease or the state of being diseased.

**Mortality**: The rate of death attributable to a disease or the state of being deceased.

**Outcome Standards**: Long-term objectives that define optimal, measurable future levels of health status, maximum acceptable levels of disease, injury or dysfunction or prevalence of risk factors.

**Pandemic**: an epidemic of infectious disease that is spreading through human populations across a large region; for instance a continent, or even worldwide.

**Particulate Matter**: Matter in the form of small liquid or solid particles.

**Point Source**: Sources of pollution that can be readily identified because of their location of origin.

**Policy Development**: The process whereby public health agencies evaluate and determine health needs and the best way to address them.

**Population-based**: Pertaining to the entire population in a particular area.

**Prevalence**: The total number of cases of a disease in a given population at a specific time.

**Prevention**: Actions taken to detect and reduce susceptibility or exposure to health problems.

**Promotion**: Health education and the fostering of healthy living conditions and lifestyles.

**Public Health**: Prevention of disease, injury or disability and promotion of good physical and mental health.
Public Health Department: Local (county, city, regional, combined city-county or multi-county) health agency with oversight and direction from local boards of health that provide health services throughout the defined geographic area.

Quality Assurance: Monitoring and maintaining the quality of public health services through licensing.

Quality Improvement: The systematic and continuous actions that lead to measurable improvement in health care services and the health status of targeted population groups.

Regional Health Commission: An association of local governments formed to provide public health services to member or contract municipalities. A regional health commission is an autonomous board of health and functions as the health department for its municipalities.

**JOB DESCRIPTIONS**

ACCREDITATION COORDINATOR: An individual assigned with the responsibility of managing and coordinating the accreditation process within the health department from early preparation for accreditation, through the accreditation decision, and the post-accreditation annual reports to PHAB.

Animal Control Officer. Animal control officers work to maintain public health standards by making communities safe for both people and animals. Animal control officers must be certified by the New Jersey Department of Health. Officers often respond to calls from citizens about stray animals, suspected animal cruelty or deceased animals. Sometimes officers must capture or rescue animals, but at other times they administer warnings or citations to citizens suspected of animal cruelty and mistreatment.

Epidemiologist: A public health professional or expert in the branch of medicine which deals with the incidence, distribution, and possible control of diseases; they analyze what causes disease outbreaks in order to treat existing diseases and prevent future outbreaks.

Health Educator. Health educators focus on helping groups of people, from family units to large urban communities, by developing educational campaigns and programs to promote healthy habits and environments. Their duties also include research and administration. Health educators work in both the public and private domains.

Health Officer. The health officer is the public health chief executive officer of a municipal, regional, county or contractual health agency. This individual is responsible for evaluating health problems, planning appropriate activities to address these health problems, developing necessary budget procedures to finance these activities, and directing staff to carry out these activities efficiently and economically. In general, a health officer is employed by a local health agency, e.g., an individual municipal local health agency, a regional health commission, or a county health department. Licensure as a health officer does not give the licensee the authority to perform the duties of other public health positions, e.g., Registered Environmental Health Specialist.

Humane Law Enforcement Officer: A municipal or county officer certified by the Police Training Commission (PTC) to enforce animal cruelty laws.

Public Health Planner: Assess the health needs of certain populations and communities, analyze and evaluate programs and policies, and use this information to develop plans to carry out public health objectives.
Public Health Nurse. A Public Health Nurse works within the community to improve the overall health of the area. Their most common places of employment include county or state departments of health or public health departments, correctional facilities, occupational health facilities, business and schools. They put together plans that alleviate or eliminate health or safety issues in a community, issues like immunizations, STDs and obesity. They also help communities prepare for natural disasters and assist in disaster relief efforts.

Registered Environmental Health Specialist. A Registered Environmental Health Specialist (REHS) administers environmental and health programs for both public and private agencies and organizations in food protection and safety, water protection, air quality, noise, industrial and land pollution, sewage disposal, hazardous and toxic substances, solid waste management and institutional health. In general, a REHS is employed by a local health agency, e.g., an individual municipal local health agency, a regional health commission, or a county health department. Some Registered Environmental Health Specialists work in private industry.

Registrar of Vital Statistics: An individual under government authority that keeps records of life events. Vital statistics are records of: birth, death, marriage, adoption, domestic partnerships, civil unions and others.
NEW JERSEY LOCAL BOARDS OF HEALTH ASSOCIATION MEMBERSHIP INFORMATION

**Why was NJLBHA formed?**

Local boards of health in New Jersey are responsible for ensuring the development and implementation of public health policy and programs in each of our communities. There was a need for a mechanism to bring local public health concerns to the attention of those who are responsible for development of state and national policy. In addition, local boards of health need a medium for communicating with each other and for accessing information and training that will improve their ability to lead their communities toward improved health. The New Jersey Local Boards of Health Association was formed to meet those needs.

Membership in NJLBHA will help you in fulfilling your responsibilities as a public official addressing the ever-increasing barrage of public health problems. Issues such as: funding, HIV/AIDS, STDs, Lyme disease, lead, tobacco control, TB, drug addiction, suicide prevention, mental health, groundwater contamination, emerging pathogens, environmental hazards and pollutants, and public health preparedness, are a few of the issues that you, as local board of health members, must address.

**Special Events**

NJLBHA joins with other key health organizations to bring you special programs and meetings.

---

**Education and Workshops**

NJLBHA provides unique learning opportunities geared to the needs of local board of health members. In addition to our meetings, we offer an orientation program for new board members, a board member certification program, and an annual conference, designed for members of local boards of health, presenting experts on current public health issues.

---

**Advocacy**

We serve as your voice on the state and national level. We represent your views on the public health issues facing us. The needs of local boards of health are now being represented by NJLBHA at the Executive and Legislative branches of state government and to our Congressional representatives.

---

**Forum for Ideas**

Through programs, workshops and our newsletter, NJLBHA provides opportunities for members of Local Boards of Health, other community leaders and health professionals to meet and exchange ideas.

---

**Publications**

The NJBHA Newsletter is published quarterly and disseminated to health leaders throughout the state. Special mailings are sent out as needed on issues of significance.

---

**Affiliations**

In addition to the executive board members you elect to represent you, we are pleased to have non-voting members on the executive board representing the New Jersey Public Health Association, the New Jersey Association of County and City Health Officials, the New Jersey Environmental Health Association, the New Jersey Association of Public Health Nurse Administrators, the New Jersey Society for Public Health Education, the New Jersey Public Health Council, and the New Jersey Department of Health.

---

**Grants**

Membership involvement and commitment is important when pursuing grants. With grants we increase the scope of membership benefits and create leadership opportunities for local boards of health.
OUR GOALS

To protect and preserve the public health

To increase the level of public health awareness among local, county and state officials and among the general public

To help the State's Local Boards of Health in meeting their responsibilities

To promote regional cooperation on Public Health concerns

To seek a rational Public Health consensus to guide the formulation of public policy and advocate a body of law designed to facilitate the protection and preservation of the public health

Yes, count me (us) in as a part of the Association that gives New Jersey's Boards of Health and their members a voice in Trenton, a way to communicate among ourselves, a force for progress in Public Health and more knowledge for board members.

**Full Board, Regular Membership $95.** Board membership is open to municipal, county and regional Boards of Health. All board members are included for the calendar year.

**Individual, Regular Membership $20.** Individual membership is open to current members of municipal, county or regional boards of health whose full board is not a member.

**Individual, Associate Membership $20.** Associate membership is open to past Board of Health members, students, or other individuals interested in public health. This is a non-voting membership.

**Institutional Membership $95.** Institutional membership is open to organizations, including environmental groups, planning boards, or other municipal or county agencies, committees, commissions, or councils. This is a non-voting membership.
